Rebuttal Letter
and Response to Reviewers

Dear Editor-in-Chief of Jurnal Studi Komunikasi,
We sincerely appreciate the editorial guidance provided on our manuscript entitled "Sarcasm and Fragmentation: Twitter Networks on Indonesia's Free Nutritious Meal Programme". We have carefully revised the manuscript to follow the JSK style and author guidelines, which has significantly improved the quality of our paper. Below is our detailed response to each point with the corresponding revisions:

Table of Revisions

ABSTRACT

No.	Editorial Comment / JSK Requirement	Response & Revision	Location
1	JSK requires an abstract of at most 250 words written in essay format.	The abstract was rewritten as a single essay-style paragraph of 247 words covering background, aim, method, main findings and conclusion.	Abstract
2	The English title must not exceed 12 words.	The title was shortened to 11 words: "Sarcasm and Fragmentation: Twitter Networks on Indonesia's Free Nutritious Meal Programme".	Title
3	The purpose and method of the research should be stated clearly in the abstract.	The abstract now states the three research aims and specifies the data (5,263 public posts, 2 March–24 May 2026, collected with NodeXL Pro), the validation sample (150 posts) and the three analyses (content, engagement and network).	Abstract, Sentences 2–4

INTRODUCTION

No.	Editorial Comment / JSK Requirement	Response & Revision	Location
1	*Do not separate the literature review from the introduction (JSK style).*	The separate sections on previous studies and theoretical review were fully integrated into the Introduction. Literature on CMC and Social Information Processing, emoji and sarcasm, engagement, graph theory and previous MBG studies now forms part of a continuous argument without a separate Literature Review header.	Introduction, Paragraphs 5–9
2	*JSK uses APA 7th edition as the sole citation standard.*	All in-text citations were reformatted to APA 7th edition narrative and parenthetical styles. The reference list (43 entries) follows APA 7th edition with DOIs where available, and Indonesian	Introduction; References

		titles are followed by an English translation in square brackets.	
3	*The introduction needs a clear thematic thread.*	The Introduction was restructured into ten paragraphs following one thread: MBG policy and budget (1) ➔ implementation problems (2) ➔ the agency's communication challenge (3) ➔ Twitter and indirect criticism (4) ➔ CMC/SIP and emoji (5) ➔ sarcasm and its detection (6) ➔ engagement (7) ➔ network structure (8) ➔ MBG studies and research gap (9) ➔ aims and research questions (10).	Introduction, All Paragraphs

RESEARCH METHODS

No.	Editorial Comment / JSK Requirement	Response & Revision	Location
1	The methods section should explain the actual research design rather than general methodology.	The opening paragraph now states the design used in this study (quantitative descriptive, combining content, engagement and network analysis) and the unit of analysis for each part, without general methodological explanation.	Research Methods, Paragraph 1
2	The section must explain how the study was actually conducted (procedural validity).	Procedural details were added: search tool, keywords and period; data cleaning (5,272 to 5,263 posts); corpus checks (402 Portuguese promotional posts; only 532 posts naming the programme); the coding scheme for emotion, sarcasm and issue; the validation procedure on 150 random posts; engagement measures; network construction and measures; and ethical handling of account identities.	Research Methods, Paragraphs 2–8
3	Technical terms should be explained clearly and not used as unsupported jargon.	Software-specific model names were replaced with a plain description of the automated classifier, and agreement is explained as chance-corrected agreement with an explicit threshold of 0.61 (Landis & Koch, 1977). Each sarcasm marker type is defined in the text.	Research Methods, Paragraphs 4–5

RESULT AND DISCUSSION

No.	Editorial Comment / JSK Requirement	Response & Revision	Location
1	Results should present empirical findings rather	The section now opens with the validation results and reports the findings with six tables and two figures: agreement,	Result and Discussion, Sub-sections 1–5

No.	Editorial Comment / JSK Requirement	Response & Revision	Location
	than conceptual explanation.	emotion, sarcasm by issue, engagement, central accounts and period comparison. Limitations of the corpus (low topical relevance on peak days) are reported with exact figures.	
2	The discussion should be evidence-based and avoid normative claims.	Claims are limited to what the data show. Proportions from the sample are reported with 95% confidence intervals, automated labels that failed validation are not used as findings, no causal relationships are claimed, and each interpretation is linked to the relevant figure or table and to previous studies. Ordinary user accounts are anonymised.	Result and Discussion, All Sections

CONCLUSION

No.	Editorial Comment / JSK Requirement	Response & Revision	Location
1	The conclusion should not merely repeat the results; it should state theoretical and practical implications.	The conclusion now has separate paragraphs on theoretical implications (SIP and emoji as sarcasm markers; modularity as fragmentation rather than polarisation) and practical implications for the National Nutrition Agency and government media monitoring, followed by limitations and directions for future research.	Conclusion, Paragraphs 2–4
2	The conclusion should directly answer the research questions posed in the introduction.	The first paragraph of the Conclusion answers the three research questions in the same order as in the Introduction: message content, communicative behaviour and network structure.	Conclusion, Paragraph 1
